

Who calls the emergency services when you're not there?

Each week in the UK, there are over 3,000 fires, of which a staggering 46% are deliberate.* And, 85% of small to medium businesses that suffer a major fire either never recover or cease trading within 18 months.** Insurance payouts following a fire can take months or even years.

Everyone is at risk of fire, and it's your responsibility to reduce that risk to your business and your employees.

You might have assessed the risk of fire to your workplace, eliminating fire hazards and implementing emergency evacuation plans, but you won't always be there.

Apart from the need to protect your people, rebuilding your company after a fire is a hugely difficult prospect with the combined cost of lost data, working hours and potentially damaged premises.

Giving you peace of mind 24/7

A monitored fire alarm system not only provides the early warning of a fire, but it's also connected to an Alarm Receiving Centre (ARC). So, if your alarm is triggered — through accident or arson — the ARC is alerted within seconds and can contact the emergency services for you, giving you that extra peace of mind.

Third-party certification assures great performance

EU legislation (EN54) states that fire detection and alarm equipment must have third-party certification, which gives you the added reassurance that you are purchasing products that meet the highest levels of quality and safety.

We're proud that our **Redcare Classic for Fire** alarm signalling system has this crucial third-party certification that meets rigorous insurance requirements for alarm signalling with fire detection systems. This LPS 1277 certification is the strongest assurance you can get that your alarm signalling system is the best choice available.

Redcare Classic for Fire uses your existing phone line and provides a high-quality monitored alarm system that gives you:

- peace of mind that your premises are fully protected
- fewer false alarms and increased reliability
- reassurance that you've chosen a high-quality product
- insurers favour LPS 1277 certified systems

LPS 1277: Issue 3
Cert No. 1270b

Definitions

ARC (Alarm Receiving Centre)

This is where the alarm systems are monitored and, if an alarm is received, the ARC will be in touch with the named key holder or the emergency services.

Alarm Transmission System (ATS)

The whole system that delivers alarm signals from a customer's premises to an ARC.

About BT Redcare

Redcare is part of BT Group plc and has been a leader in the fire and security market since 1985. We are a leading supplier of alarm signalling services in the UK, securing hundreds of thousands of homes and businesses with our services.

The services described in this publication are subject to availability and may be modified from time to time. Services and equipment are provided subject to British Telecommunications plc's respective standard conditions of contract. Nothing in this publication forms part of any contract.
